Julien Gourdon - Freelance

Développeur .NET/Web Fullstack

👤 My journey

After a 5 years in a permanent contract in a small software editor specialized in the medical field, i start again a freelance status to diversify my activities.

I lead a nomadic life for 7 years, so the remote position is a priority if i have to work with a company. I compensate this with a strong expertise and autonomy, and i can ponctually move anywhere in the world if its needed.

Software and web developer with 10 years experience in different companies, I developed various technicals skills and large ability to adapt to various organizations. I am competent across the entire Microsoft technology chain, for application development and general web development, technological consulting, technical project leadership, training, expertise.

I like diverse and quality work in dynamic work environments. I systematically try to produce a modular, maintainable and documented code, as simple as possible and respectful of best practices and existing design patterns.
